[LinkedIn](#)

[GitHub](#)

Highly motivated frontend developer with proven technical skills in creating high quality web applications.

Efficient in **HTML, CSS, JavaScript** and with experience in **React, NodeJS, API'S, Bootstrap, GitHub, webpack, Vite, Responsive Design, Media Queries** and preprocessors such as **Sass, Less** and **Pug**.

Committed to the continuous improvement of my skills to keep me updated on the latest trends and technologies.

[VAGGIO](#) 

I built in **REACT** the website of a restaurant using components, implemented **responsive design**, imported fonts and various **metadata**, used multiple **hover effects** and made use of **relative and absolute position** for some sections, used animations for the **navigation bar**

[RANDOMDOGS](#) 

Consuming an **API** with **FETCH** using the **HTTPS GET, POST** and **DELETE** methods, the page allows you to save the favorite random dogs, see the list of favorites and remove them from it thanks to different **control structures** (cycles and functions and using asynchronism (**await and async**) I also used **Bootstrap** and **Sass** and implemented a preloader.

[CALCULATOR](#) 

I built an interactive calculator in **REACT**, installed a **dependency (math.js)**, used **flexbox** for its layout and different selectors (**ID, class, universal, pseudo-classes**) to stylize it and different **arrow functions** so that its functionality was optimal and I ended up **deploying** the project using **NPM** and **Netlify**.
